

1A GeV ^{10}B Coherent Dissociation Into 2+2+1

Fragment Charge, Z					Number of Events
5	4	3	2	1	
	1	-	-	1	3(1)
	-	1	1	-	11(5)
	-	-	1	3	14(5)
	-	-	2	1	56(30)
1	-	-	-	-	5(0)
	-	-	-	5	2(0)

In 65% of such peripheral interactions the ^{10}B nucleus is disintegrated to two double charged and a one single-charged particles. A single-charged particle is the deuteron in 40% of these events like in case of ^6Li .
