

# Лаборатория Высоких Энергий им. В.И.Векслера и А.М.Балдина

## - долгосрочная научная программа

Международное совещание посвященное  
Памяти В.И.Векслера,  
10-12 октября 2007, Дубна

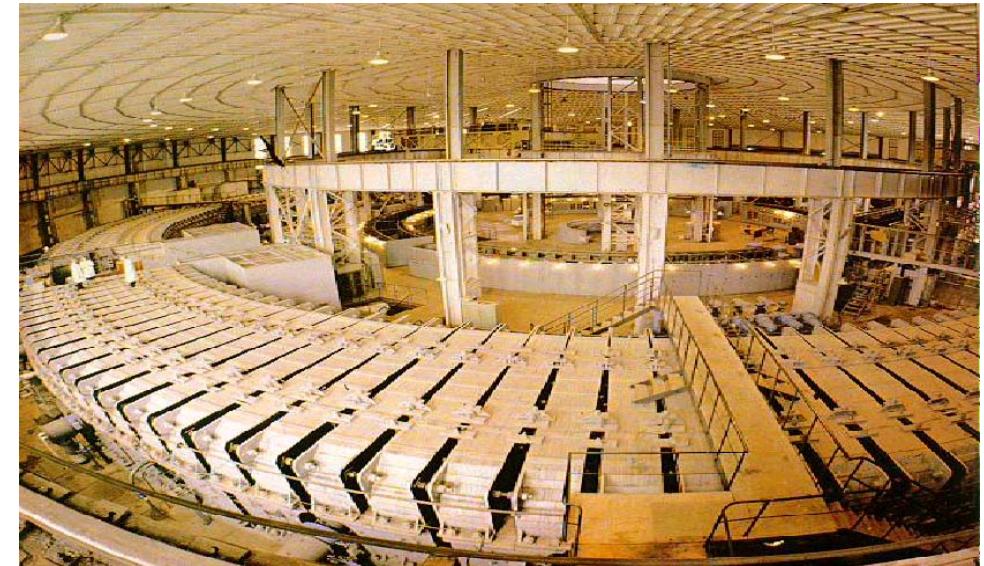

- *Пролог*
- *Программа исследований*
- *Базовая установка: от Нуклотрона к НИКЕ*
- *Физика на Нуклотроне*
- *Физика на внешних ускорителях*
- *Иновации*
- *Заключение*

# Пролог

**Знаменательные события этого года:**

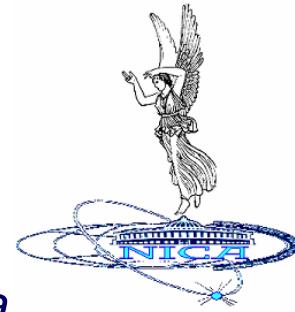

- **100-й летний юбилей**  
академика **В.И.Векслера**
- **50-я годовщина запуска**  
**синхрофазатрона**

## Пролог

**1957г. запуск синхрофазотрона –  
крупнейшего в мире ускорителя  
фактически дал старт  
ускорительной физике высоких  
энергий, обеспечив на определенном  
отрезке истории лидирующую роль  
ОИЯИ в этих исследованиях**

# Пролог

Очередным прорывом в области ускорителей было создание в ОИЯИ по инициативе академика А.М.Балдина

**НУКЛОТРОНА** – первого сверхпроводящего ускорителя релятивистских ионов

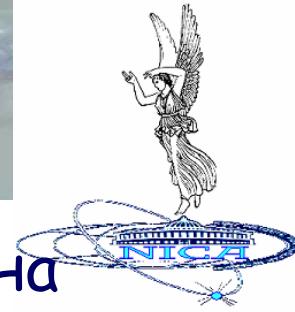

построен в ОИЯИ за пять лет (1987-92 гг.) и запущен в 1993 г.

11 октября 2007

В.Кекелидзе, В.И.Векслеру 100 лет

# Программа Исследований

**Научная программа** Лаборатории оптимизирована  
в рамках «**Дорожной Карты**» ОИЯИ

## Основные области исследований:

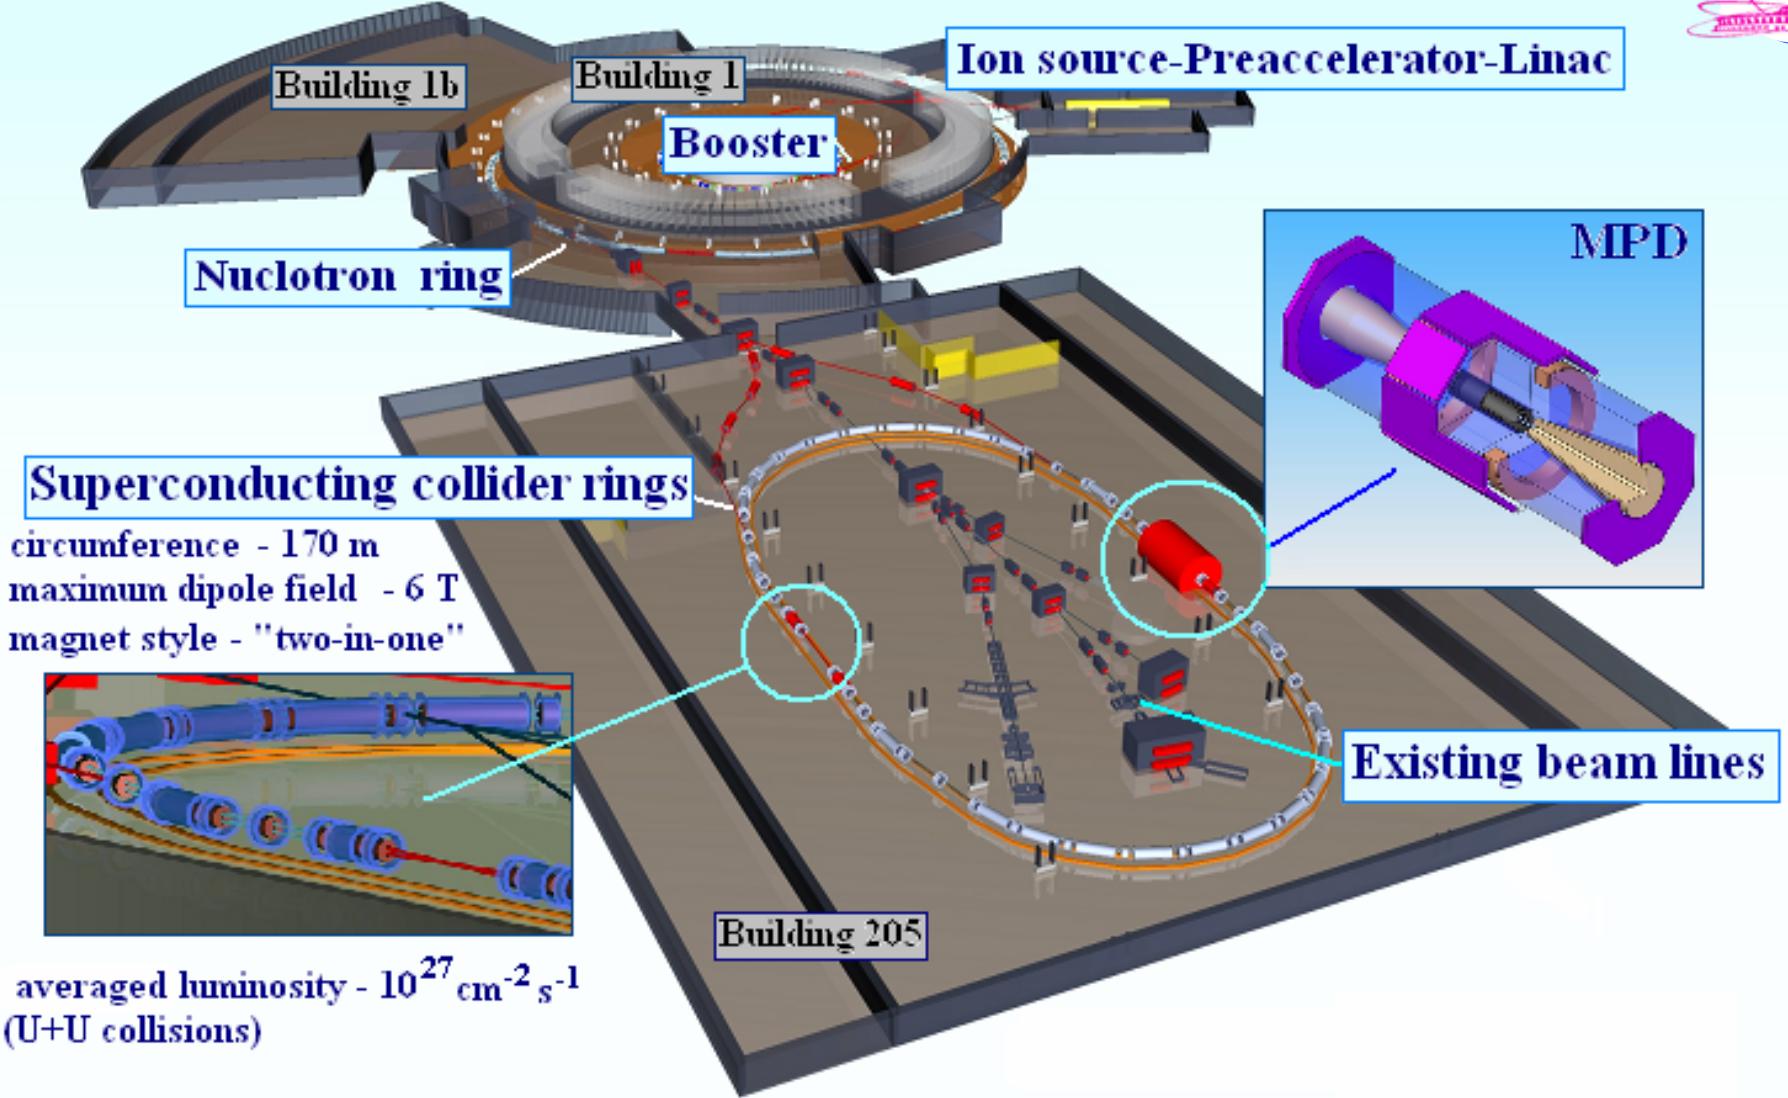

- **Физика релятивистских тяжелых ионов**  
*изучение фазовых состояний  
сильновзаимодействующей материи  
поиск фазовых переходов и критической точки*
- **Поляризационные явления малонуклонных систем**  
*исследования спин-зависимых процессов  
поиск новых явлений*
- **Физика ароматов**  
*изучение правила ОЦИ  
поиск многокварковых состояний (пенакварки)  
экзотические ядра (гипер ядра)*

# Программа Исследований

- **NICA / MPD** проект нацелен на исследование горячей и плотной сильно-взаимодействующей материи и поиску проявлений фазовых переходов и критической точки в столкновениях тяжелых ионов
- **NICA / MPD** - лидирующий проект ЛВЭ как по научной программе, так и по развитию базовой установки в **2008-2015**
- ожидается, что этот **флагманский** проект обеспечит:
  - *проведение передовых исследований по физике тяжелых ионов*
  - *привлечение молодежи*
  - *и образование широкой международной кооперации*
    - *развитие новых технологий (в т.ч. нано-...)*
    - *привлечение и освоение значительных ресурсов*

# NICA project major stages

- **Stage I**  
**(2007-2009)**  
*upgrade of the **Nuclotron facility**  
wide program of R&D  
preparation of **Technical Design Report***
- **Stage II**  
**(2008-2012)**  
*design & construction  
infrastructure development*
- **Stage III**  
**(2010-2012)**  
*+ assembling*
- **Stage IV**  
**(2013)**  
*commissioning  
& putting in operation*

## Nuclotron-M - the first stage of NICA

- New Injection complex includes:
  - developed source of highly charged ions (KRION)* - in progress
  - R&D on the RF system* - in progress
  - new Linac* - the contract under negotiation
- Improved vacuum system - equipment partially ordered
- Upgraded system for the main magnetic field cycle control
  - first block at the commissioning stage
- Modernization of the beam diagnostic system - in progress

Necessary R&D are planned at the forthcoming Nuclotron seances

This stage should be completed by the **end of 2009** providing:

- acceleration of heavy ions up to Au
- with an intensity of extracted beams  $\sim >10^9$  A/cycle
  - (& repetition rate 0.2-0.4 Hz)
- at the energy of  $\sim 3.5$  GeV/n (for Au)
  - developed infrastructure

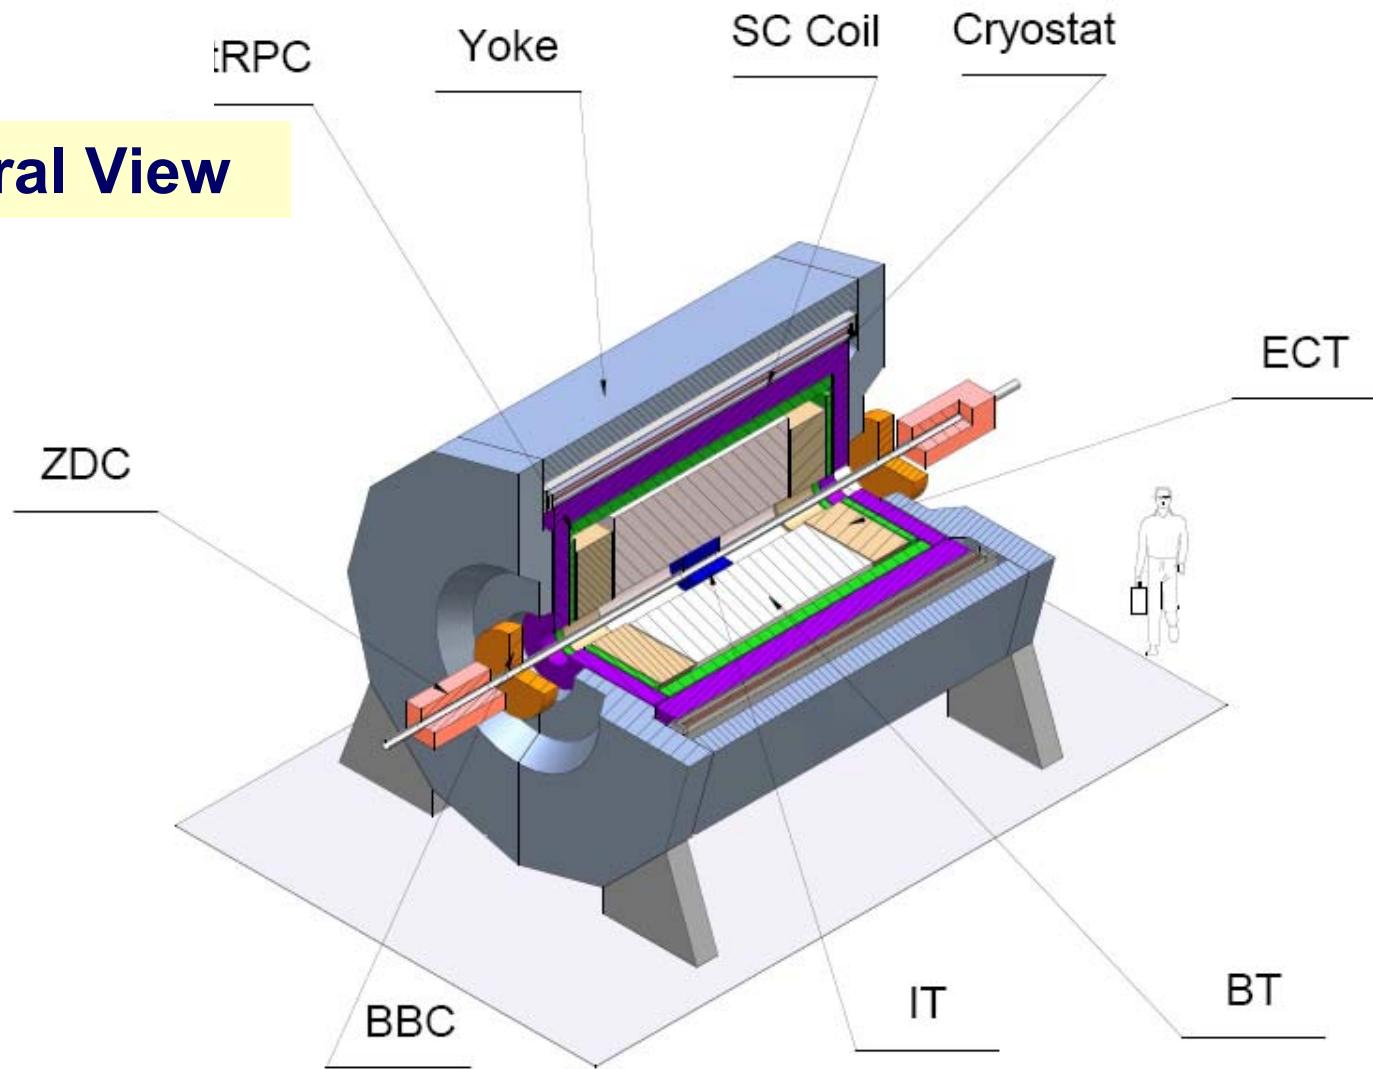

# Experimental Tasks – the first stage

*the following effects will be studied  
(on energy & centrality scanning):*

- *Event-by-event fluctuation in hadron productions  
(multiplicity,  $P_t$  etc.)*
- *HBT correlations indicating the space-time size of the systems involving  $\pi$ ,  $K$ ,  $p$ ,  $\Lambda$   
(possible changes close to the de-confinement point)*
- *Directed & elliptic flows for various hadrons*
- *Multi-strange hyperon production:  
yield & spectra (the probes of nuclear media phases)*

# MPD – conceptual design

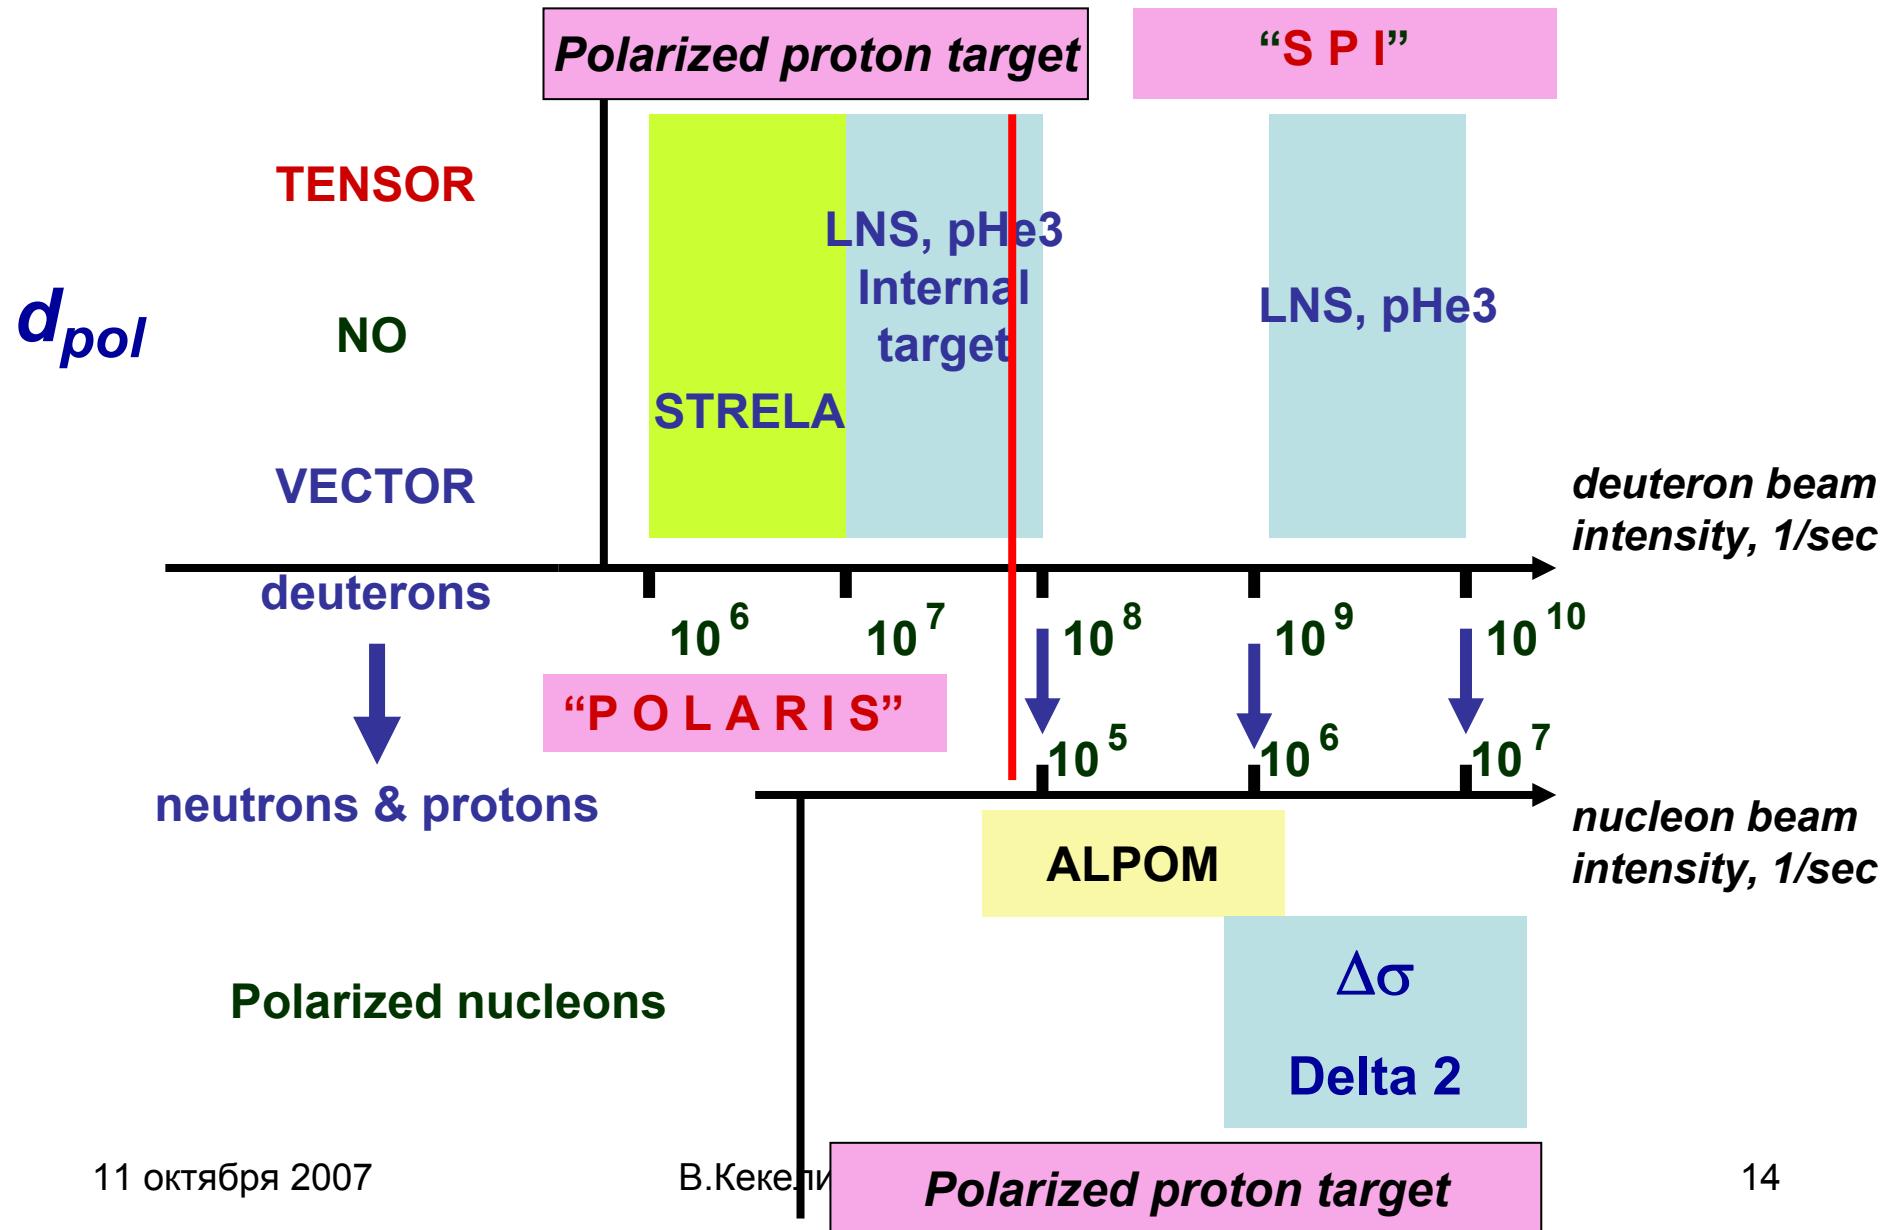

## General View

## Physics at Nuclotron

# POLARIZATION PROGRAM

		2007	2008		2009		2010	
	Nuclotron runs: period, # / hours	Oct.-Nov., <b>37 / 600</b>	Feb.-Mar., <b>38 / 600</b>		Oct.-Nov., <b>39 / 600</b>		Feb.-Mar., <b>40 / 600</b>	Oct.-Nov., <b>41 / 600</b>
	beams	d, ${}^6\text{Li}$	d, ${}^6\text{Li}$		p, $\text{A} \leq 130$		$\text{d} \uparrow$ , p, A $\sim 4 \text{ GeV/N}$	p, $\text{A} \leq 200$
Accel. R&D	Nuclotron-M	x	x	x	x	x	x	x
	«CIPIOS» → SPD	<i>put in operation</i>						ready
Flavor	NIS+GIBS		x	x	x	x	x	x
Polarization	TPD		x					
	Internal target: LNS			o			x	
	Extracted beams: STRELA, $\Delta\sigma$ , $\Delta 2$ , ALPOM ( $T \geq 4.5$ , GeV/n)		o	o			x	
	MPPT	<i>preparation (transverse polarization)</i>						ready
RNP	FAZA		x	x	x	x	x	x
	Physics & R&D for NICA: Marusya, $\eta$ -nucl., Becquerel		x	x	x	x	x	x
Applied & innovation works		x	x	x	x	x	x	x

Well focused tasks of Nuclotron-M program, 100-300 h. Pre-requisit for NICA & physics.

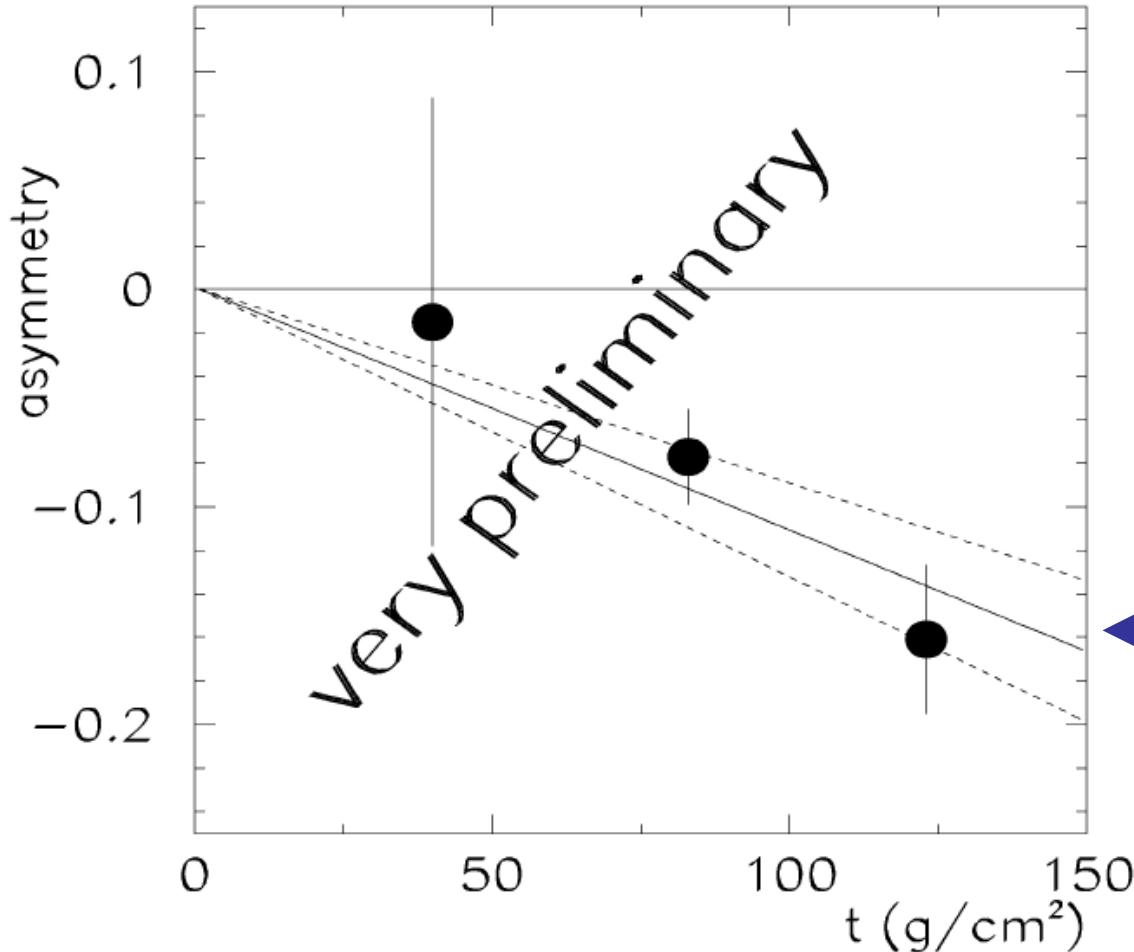

Physics – ready to start

Work with POLARIS (conditional): requires successful Nuclotron-M stages (high intensity, energy)

# TPD experiment

L.Zolin, L.Azhgirey

**Search for the effect** of induced tensor polarization of deuterons passing through the material (different “refraction” index for different spin states).

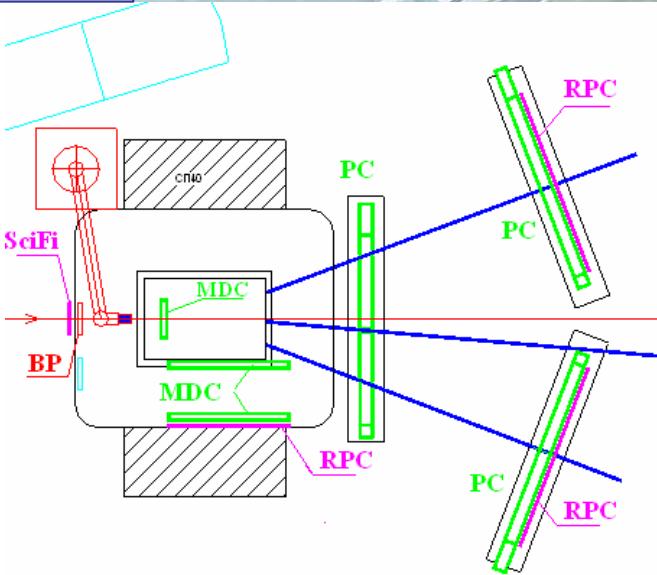

Unpolarized deuteron beam is passing through the matter & are analyzing in the polarimeter sensitive to the tensorial polarization.

First measurement obtained in March '07 run at Nuclotron (to be confirmed)

# NIS (Nucleon Intrinsic Strangeness) E.Strokovsky, A.Litvinenko

**Q.:  $R(\phi/\omega) \gg R(OZI)$  is a privilege of annihilation or not?**

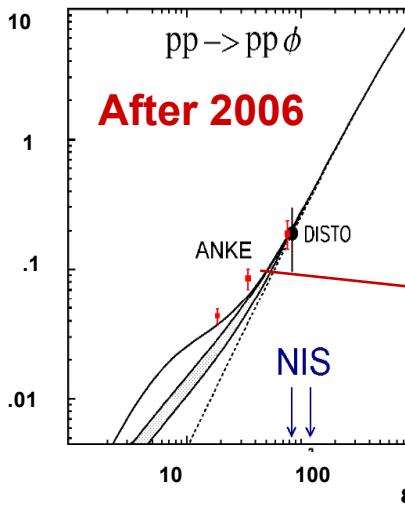

**A.: It is not!**

- **Exotic baryons:** New states, can be detected by the NIS spectrometer (at production level  $\sigma \geq 0.05 \mu\text{b}$ )
- **Intrinsic strangeness** and exotic baryons may be closely connected and related with the problem of the “*Spin crisis*”...

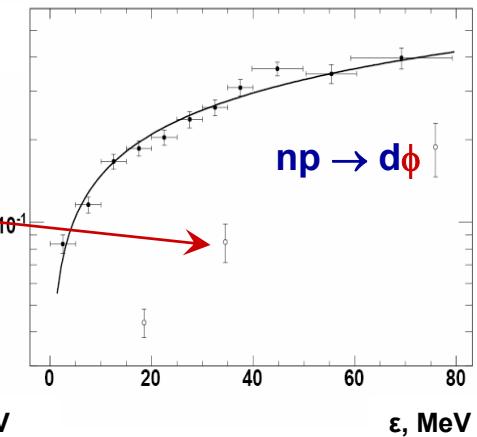

## 1. Test of OZI rule in $\text{pp} \rightarrow \text{pp} + \phi/\omega$ and $\text{np} \rightarrow \text{np} + \phi/\omega$ near threshold

ANKE data:  $R_{\phi/\omega} \approx 8 \times R_{OZI}$  (function of excess energy)

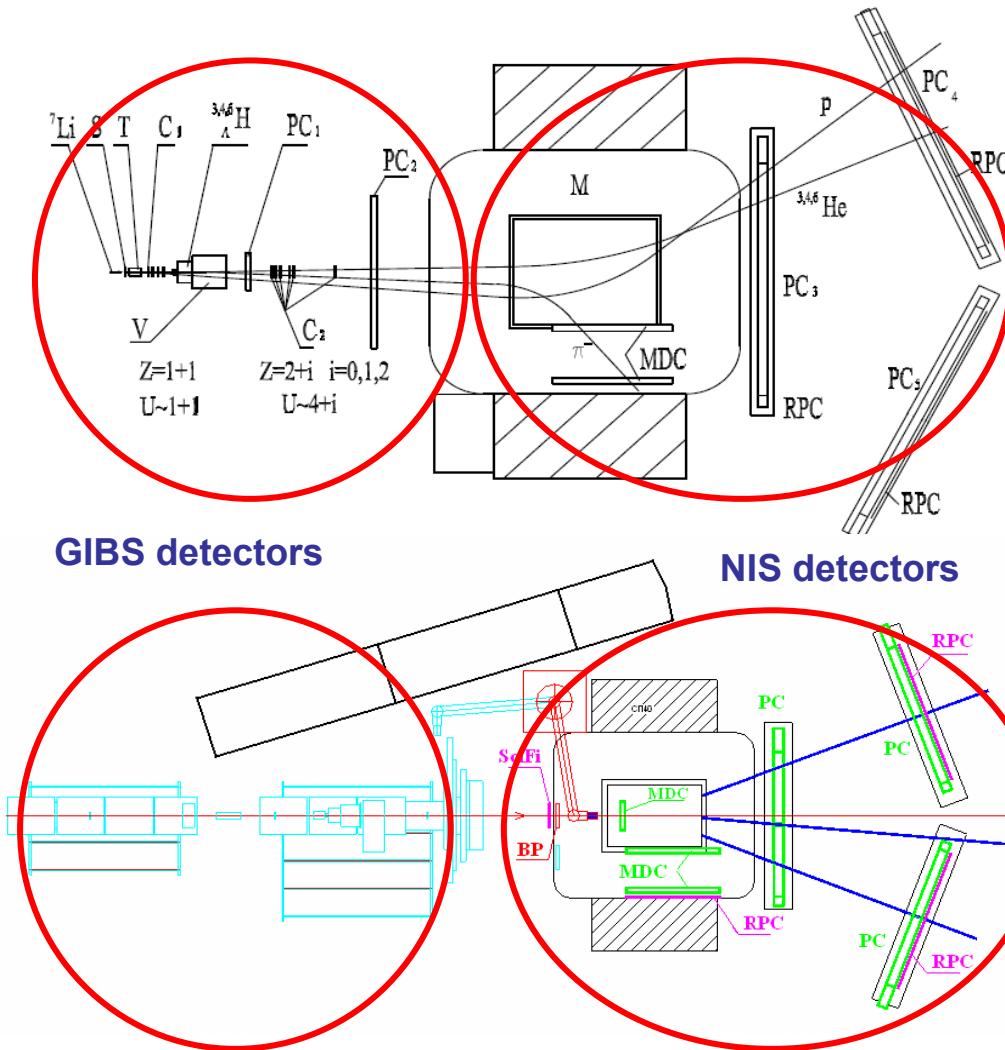

$\sigma, \mu\text{b}$

$\sigma, \mu\text{b}$

## 2. Search for $\Theta^+$ production in pp near threshold (the problem is not solved)

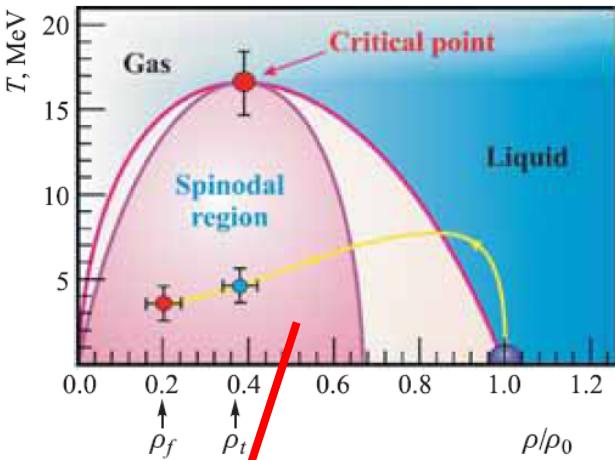

## Physics of lightest hypernuclei

### Goals:

- **Search for unobserved  ${}^6\Lambda\text{H}$**   
(probing the drip-line for hypernuclei sector, low limit for cross section  $\sim 0.02\mu\text{b}$ )
- **Measurement of lifetime for  ${}^6\Lambda\text{He}$**
- **Determination of matrix elements of weak  $\Lambda\text{N}$  interaction in study of non-mesonic decays of hypernuclei  ${}^{10}\Lambda\text{Be}$  and  ${}^{10}\Lambda\text{B}$**
- **Binding energy measurements for lightest hypernuclei**

**FAZA data for  $p+Au$  collisions.**

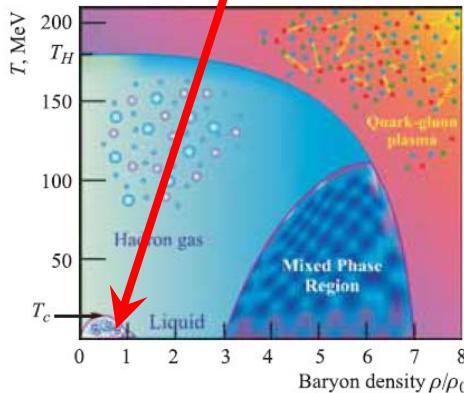

**Subject:** phase transitions in hot nuclear matter  
(expansion and evolution from hot to cold)

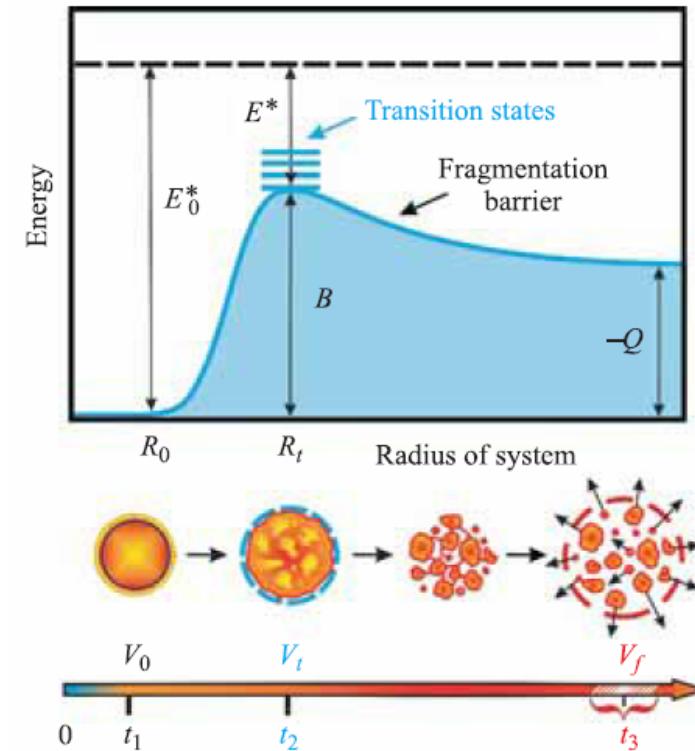

**The first goal:** measurement of the mean emission time for thermal multifragmentation.

**Line:**  
*zero rigidity  
of the nuclear  
matter*

Fig. 1. The spinodal region for the nuclear system. Temperature and baryon density are shown on the axes. Data are obtained by FAZA for  $p(8.1 \text{ GeV}) + \text{Au}$  collision. The arrow line shows the way of the system from the starting point at  $T = 0$  to the break-up at  $\rho_f$ , where prefragments are formed, and multiscission points at  $\rho_t$

**Assumed nuclear phase diagram.  
Baryon density is given in units of the normal one**

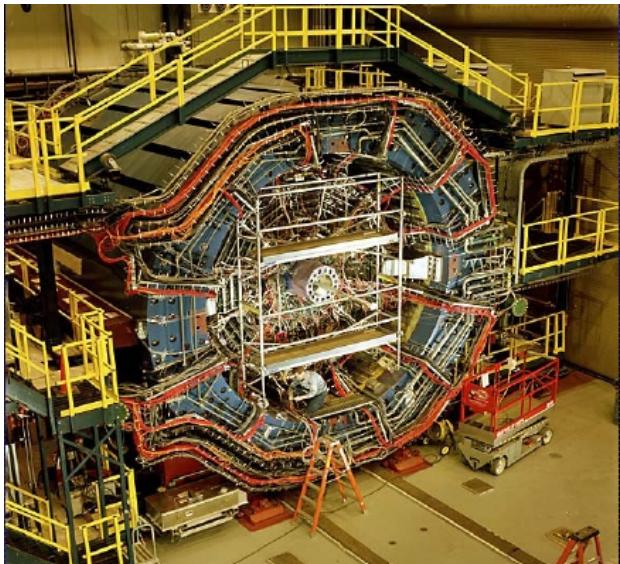

## Physics at external accelerators

**LHE groups have well defined responsibility in physics analysis & positions in physics program**

**The STAR  
Collaboration:  
12 countries,  
49 Institutions,  
~ 500 People**

- ## RESEARCH PROGRAM FOR 2008-2010:
- Definitive results on the saturation scale for the gluon distribution in relativistic heavy nuclei
  - Decisive test of gluon saturation as the origin of particle suppression at forward pseudorapidity
  - First significant measurements of the  $x$  dependence of gluon polarization in the proton,  $\Delta G(x)$
  - Definitive search for the existence and location of the QCD Critical Point
  - First measurement of flavor dependence of sea quark anti-quark polarization in the proton

## *Study of Hadron Production in Hadron-Nucleus and Nucleus-Nucleus Collisions at the CERN SPS*

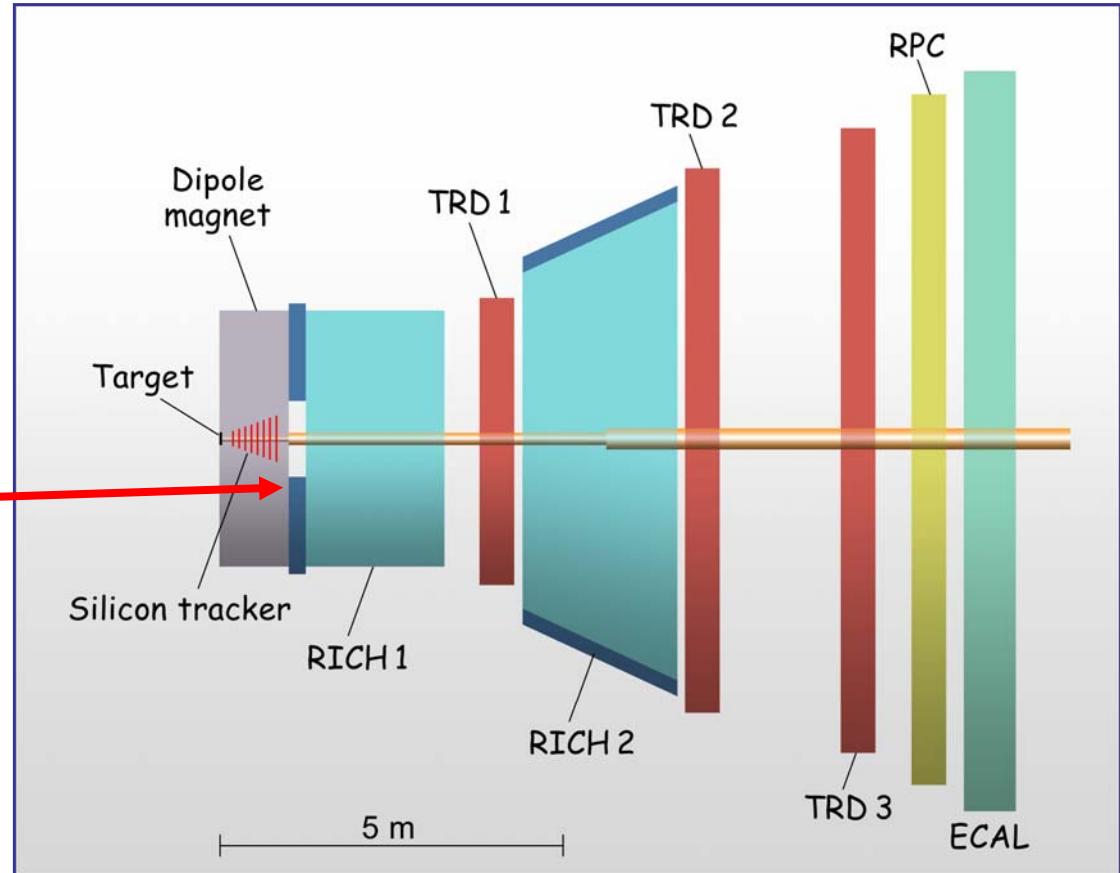

**Search for the critical point of strongly interacting matter**

*Study the properties of the onset of deconfinement in nucleus-nucleus collisions*

*Measure hadron production at high transverse momenta in p+p and p+Pb collisions as reference for Pb+Pb results*

## LHE participation:

- **Transition Radiation Detector (TRD)**
- **Superconducting Dipole Magnet**
- **Simulation (tracking, magnetic field)**
- **Physics**
- **The NUCLOTRON will be used as a test bench for CBM detectors**

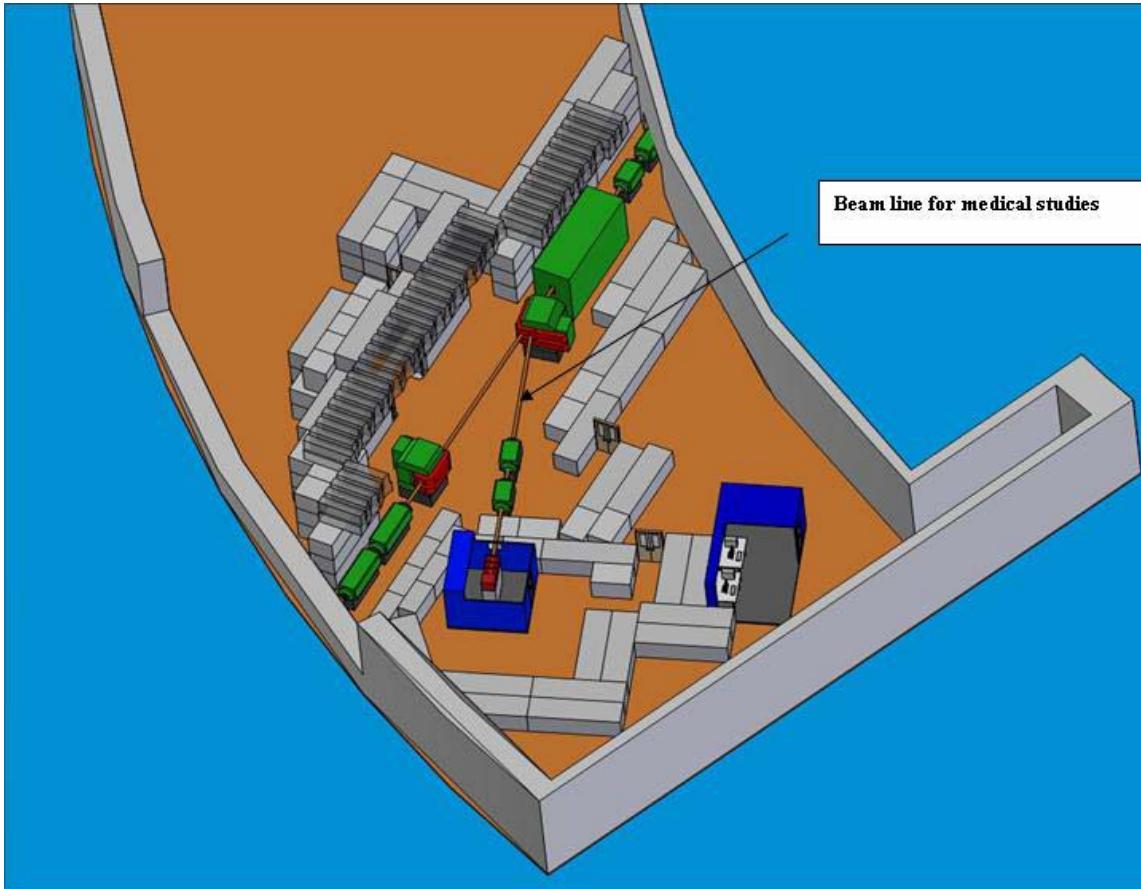

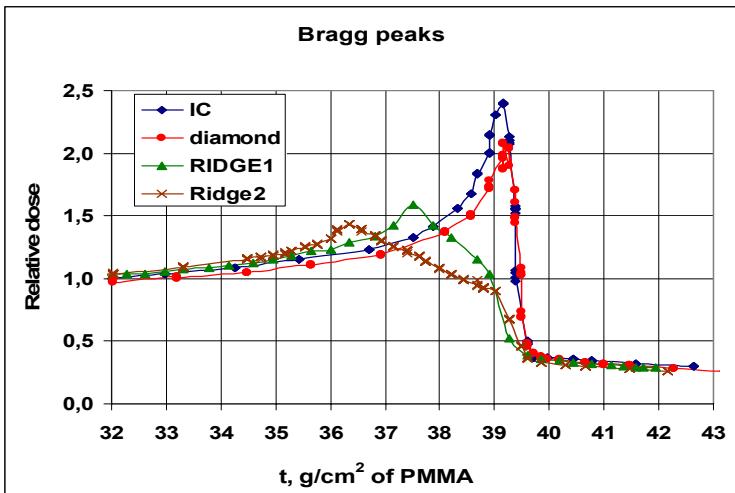

## *Innovations*

- **Development of radiotherapy methods with proton and heavy ion beams of the Nuclotron**
  - *Biomedical research on the proton and ion beam to develop new methods for oncology diseases therapy (V.M.Golovatyuk, E.A.Krasavin, J.Ruzicka)*
  - *Design a superconductive accelerator of heavy ions for medical therapy, design a beam transport system to the patient (**gantri**) with the superconductive magnet (N.N.Agapov)*
- **Study of transmutation of spent fuel from nuclear power plants (V.M.Golovatyuk, M.I.Krivopustov)**
- **Micro-pixel photodiodes (Z.Sadygov)**

# Medico-biological beam line

**Depth-Dose distributions  
 (Brag peak) measured by wide  
 aperture transmission  
 ionization chamber & diamond  
 detector & the modified depth  
 dose distributions**

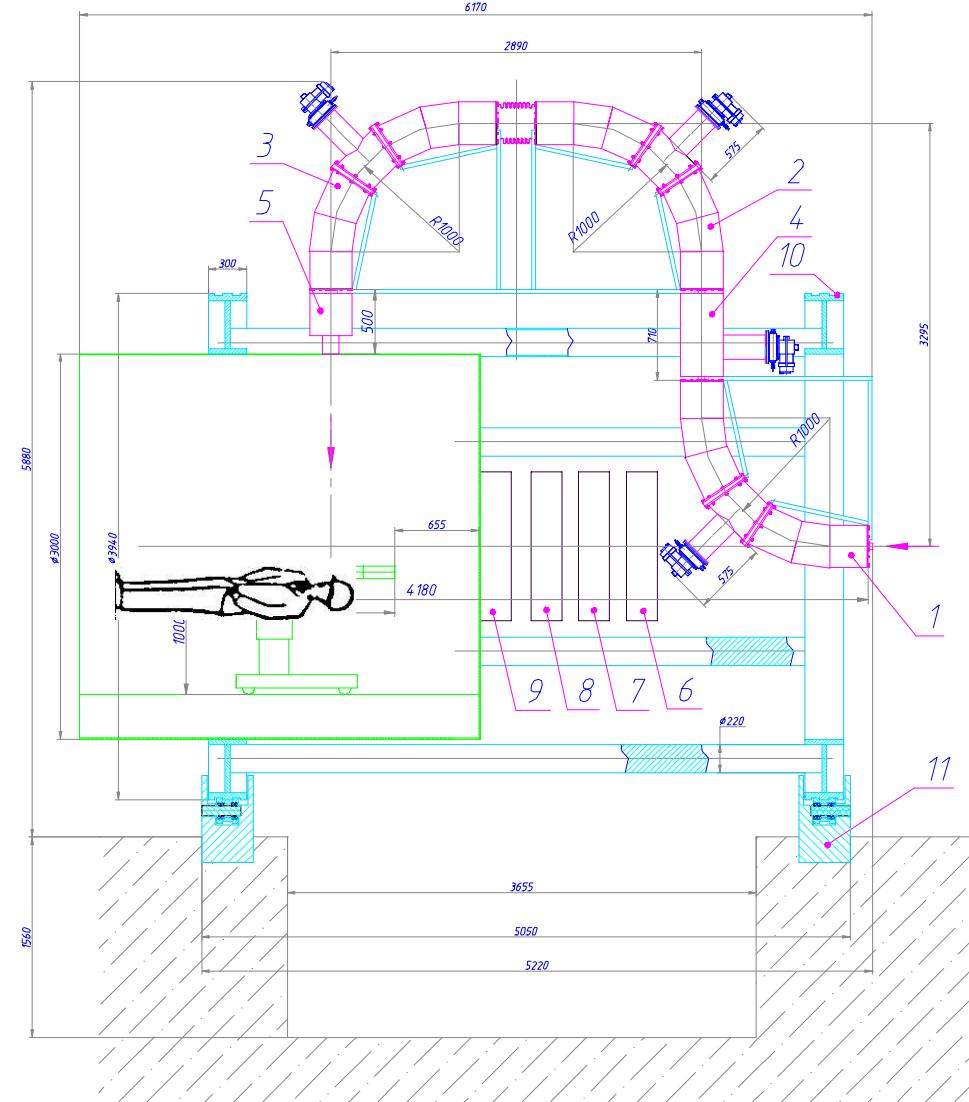

**Slovakia & Romania representatives actively participate in the series of experiments with the Carbon beam at the Nuclotron.**

# GANTRY with superconducting magnets

- 1, 2, 3 - dipole magnets;**
- 4 - focusing magnet;**
- 5 - scanning magnet;**
- 6 - sealing of helium tubes;**
- 7 - sealing of vacuum tube;**
- 8 - electric sliding connection;**
- 9 - electric sliding connection of cold head valves;**
- 10 - frame of GANTRY;**
- 11 - support of frame wheels;**
- 12 - screen.**

***Weight & size are 10 times less than the “warm” systems***

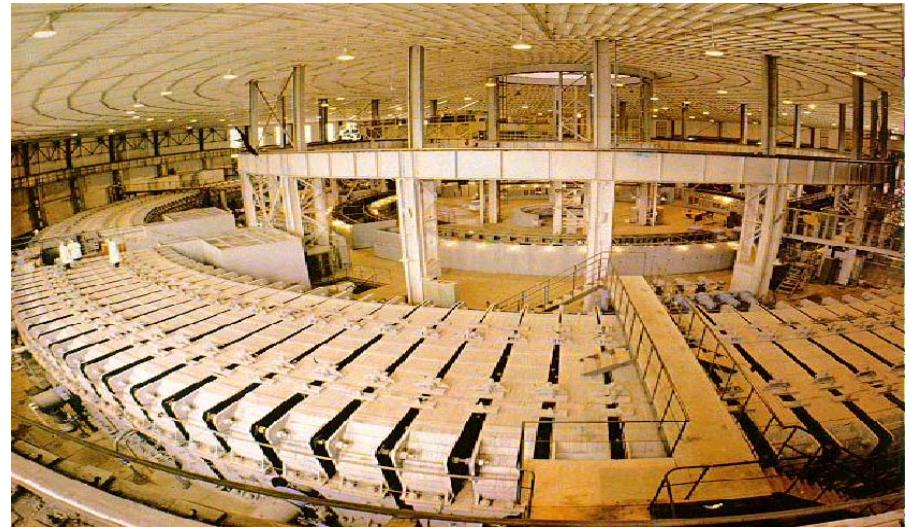

## Заключение

- Реализация I этапа проекта NICA в 2007-2009 важнейшая задача - **критичная для формирования стратегических планов Лаборатории**
- Научная программа Нуклotronа определяется прежде всего:
  - задачами развития ускорительного комплекса
    - и конкурентоспособными экспериментами привлекательными для широкой кооперации
- Эксперименты на внешних ускорителях непосредственно связаны с домашними задачами
- Имеется определенный интерес к продолжению начатых инновационных проектов

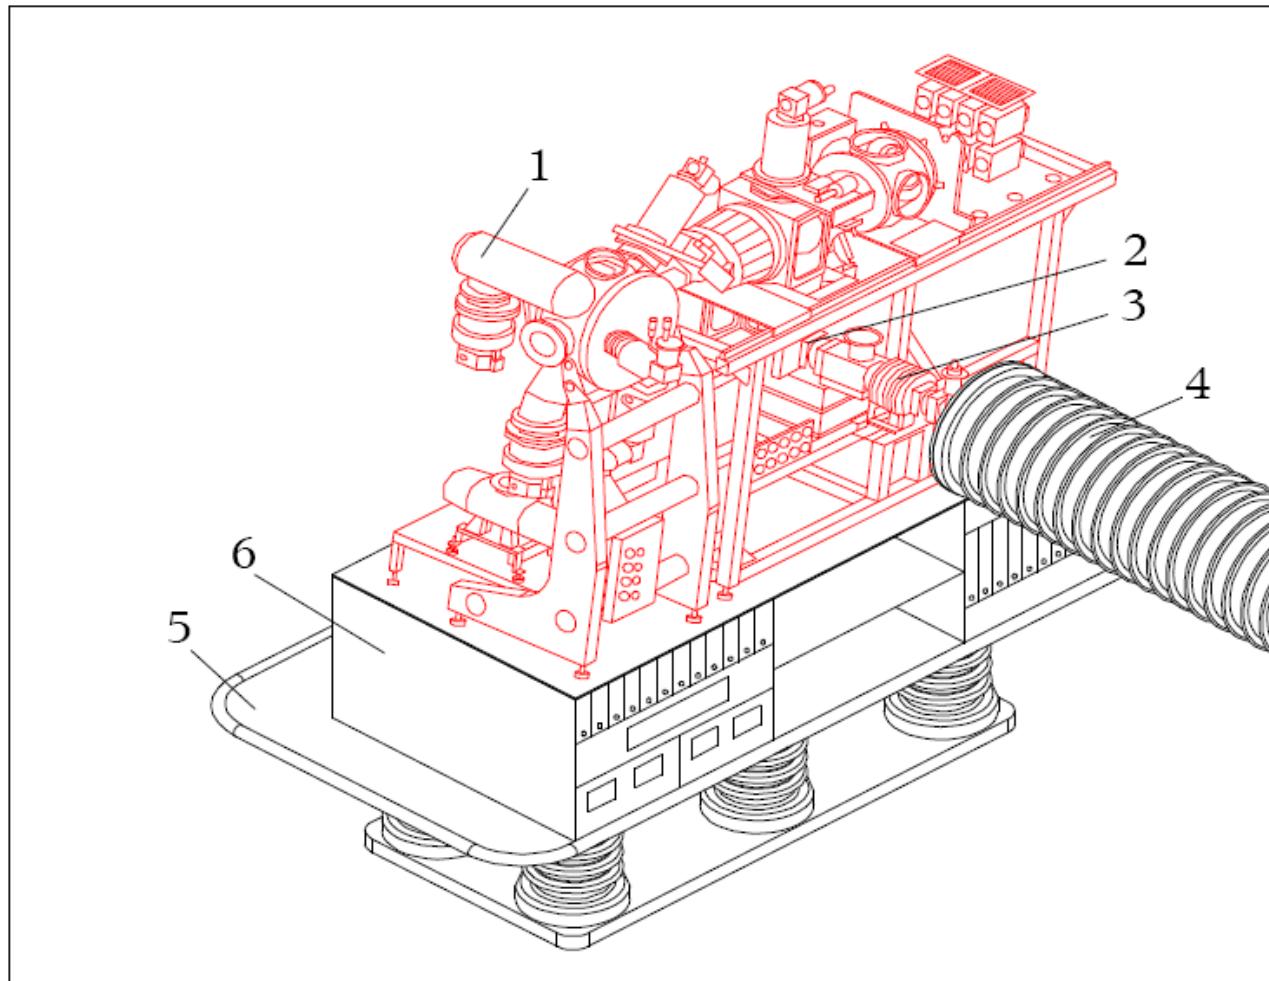

## Remarkable events in 2007:

- the 100-th anniversary  
of academician V.I. Veksler
  
- the 50-th anniversary  
of Synchrofasatron

*Dedicated celebration events will take place in October*

**spare**

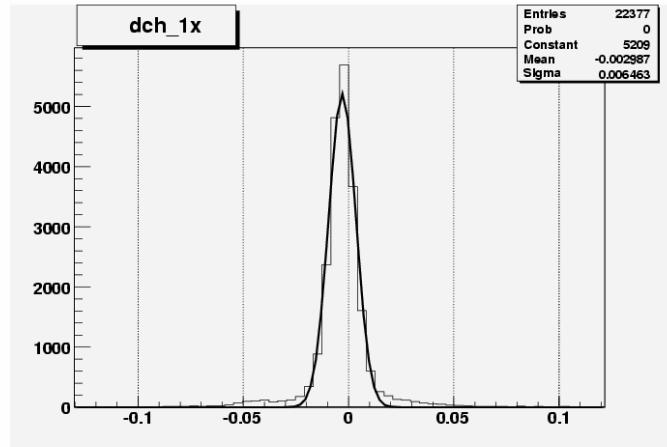

## The key pre-requisite for polarization studies at JINR

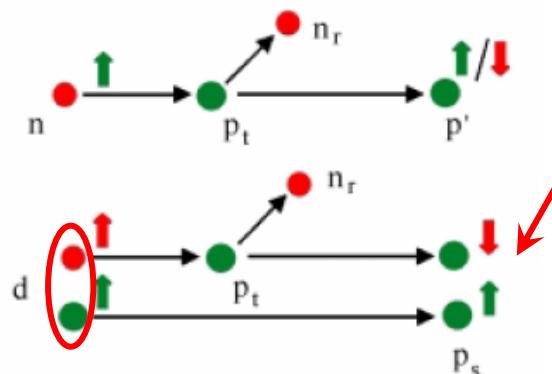

11 октября 2007

В.Кекелидзе, В.И.Векслеру 100 лет

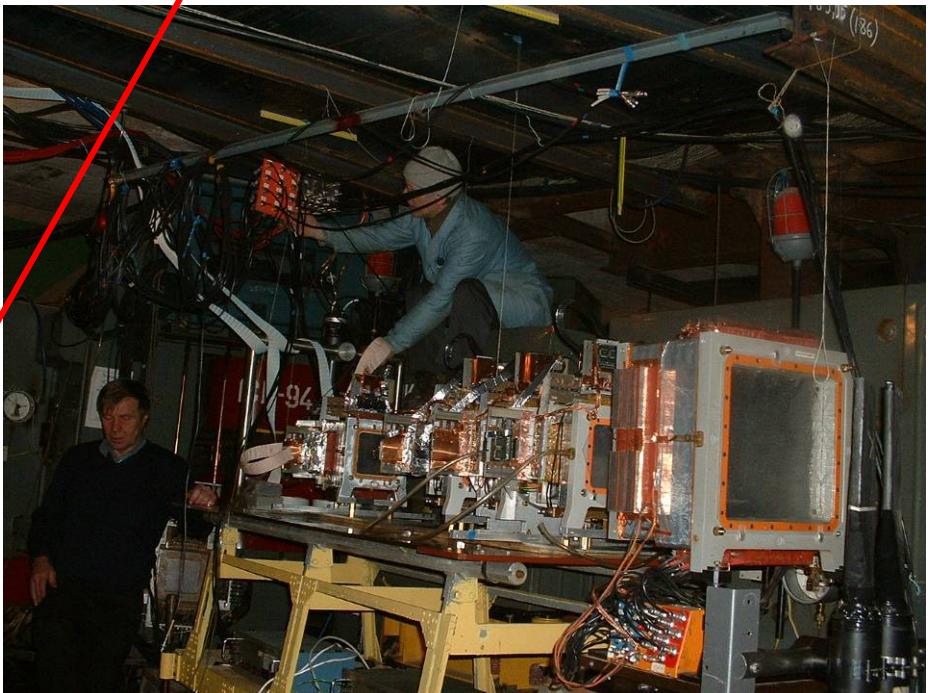

32

coordinate resolution  $\sim 100 \mu\text{m}$  (drift chambers)

Measurements of the cross section and  $T_{20}$  in  $\text{dp} \rightarrow \text{pp}(^1\text{S}_0) + \text{n}$  charge exchange reaction

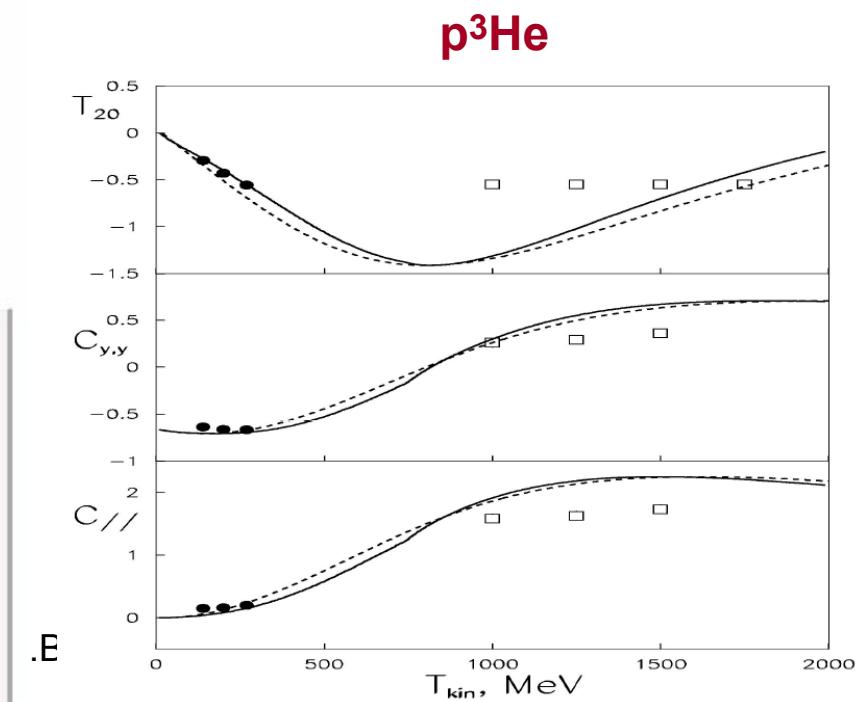

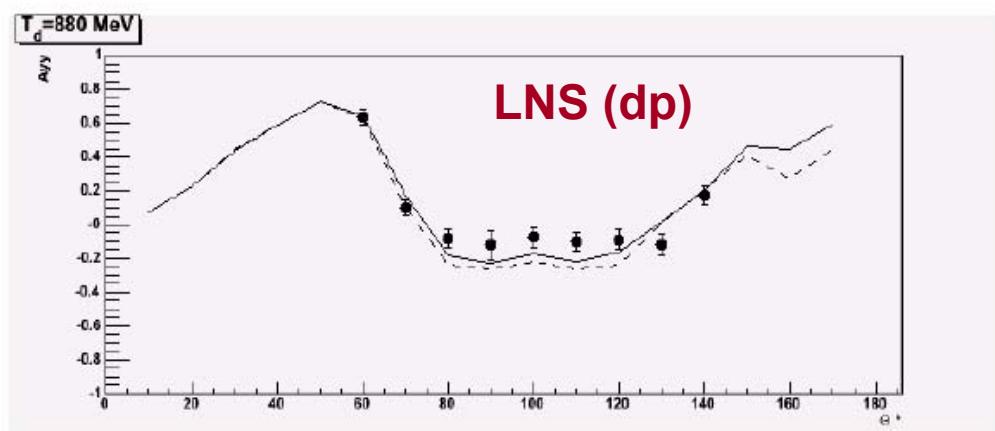

$$\frac{d\sigma}{dt} (\text{dp} \rightarrow \text{n}(\text{pp})_S (\theta_{\text{cm}} = 0^\circ)) = [1 - F_d] \left( \frac{d\sigma}{dt} \right)_{\text{spin-indep.}} + \left[ 1 - \frac{1}{3} F_d \right] \left( \frac{d\sigma}{dt} \right)_{\text{spin-dep.}}$$

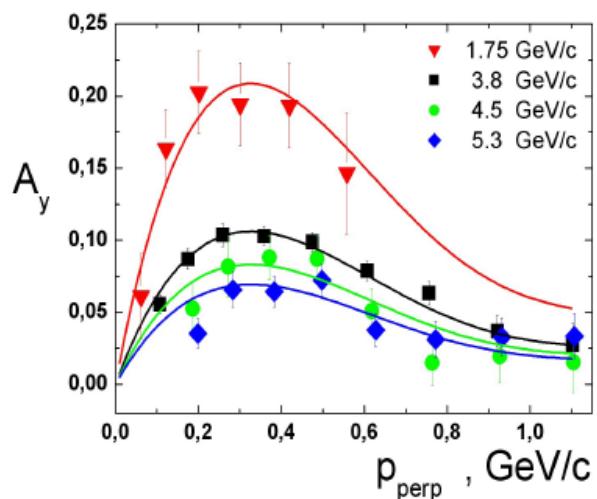

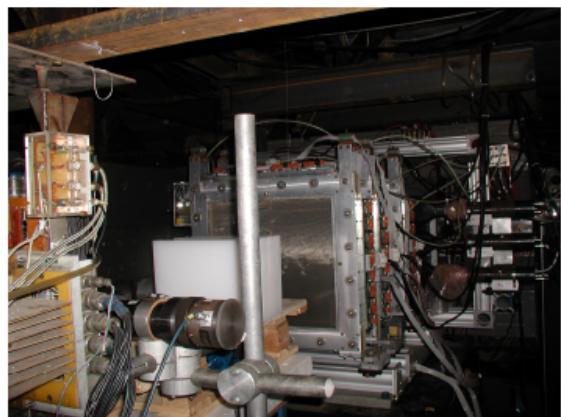

at small  $| t |$ :  $F_d \rightarrow 1$  and

The goals are: (1) to measure the analyzing powers in the dp-elastic and dp-breakup reactions, (2) to establish deuteron beam polarimetry at 270 MeV (**LNS**).

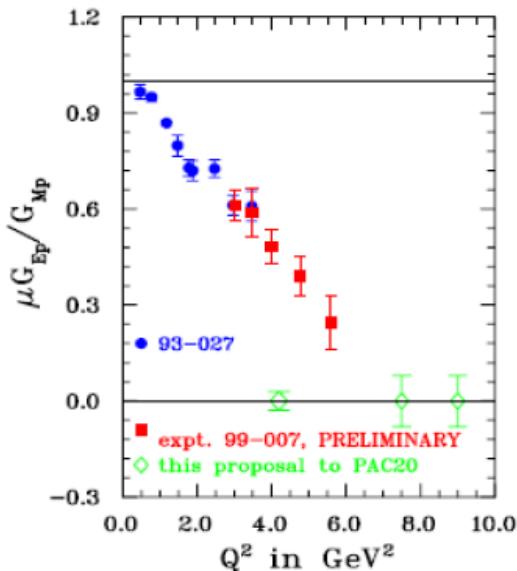

**p<sup>3</sup>He:** to measure the polarization observables in the  $d^3\text{He} \rightarrow p\alpha$  in a GeV range in the region of the deuteron D-wave dominance; (2) the energy dependence of 3NF and high energy deuteron polarimetry.

Calibration of polarimeter for JLAB  $\mu_p G_{Ep}/G_{\mu p}$  experiment:  
measurement of the analyzing power for  $pCH_2 \rightarrow "p"X$  reaction at momenta ~7 GeV/c

Previous data

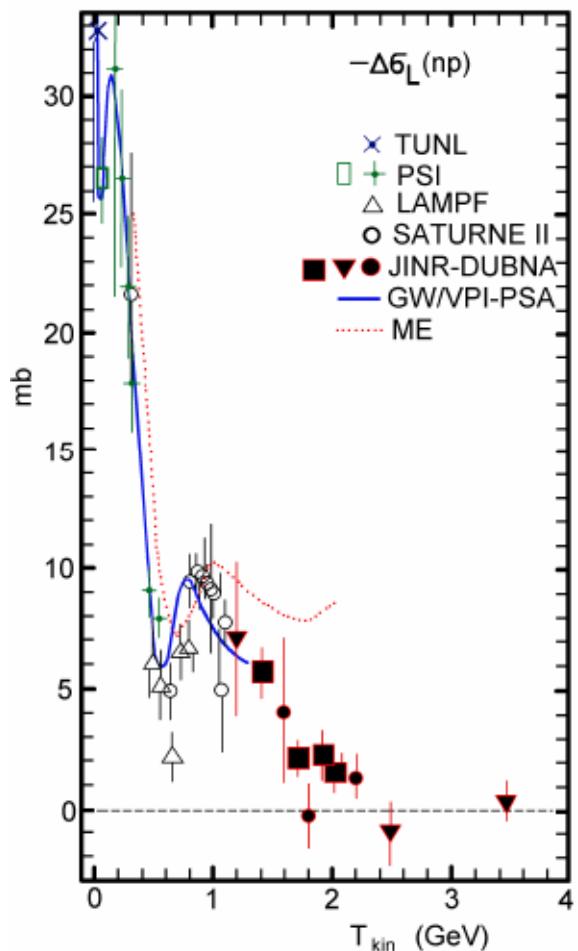

“The  $\mu_p G_{Ep}/G_{\mu p}$  puzzle”

JLAB data from  
expt. 93-027 & 99-007  
and proposal 00-111  
for  $\mu_p G_{Ep}/G_{\mu p}$

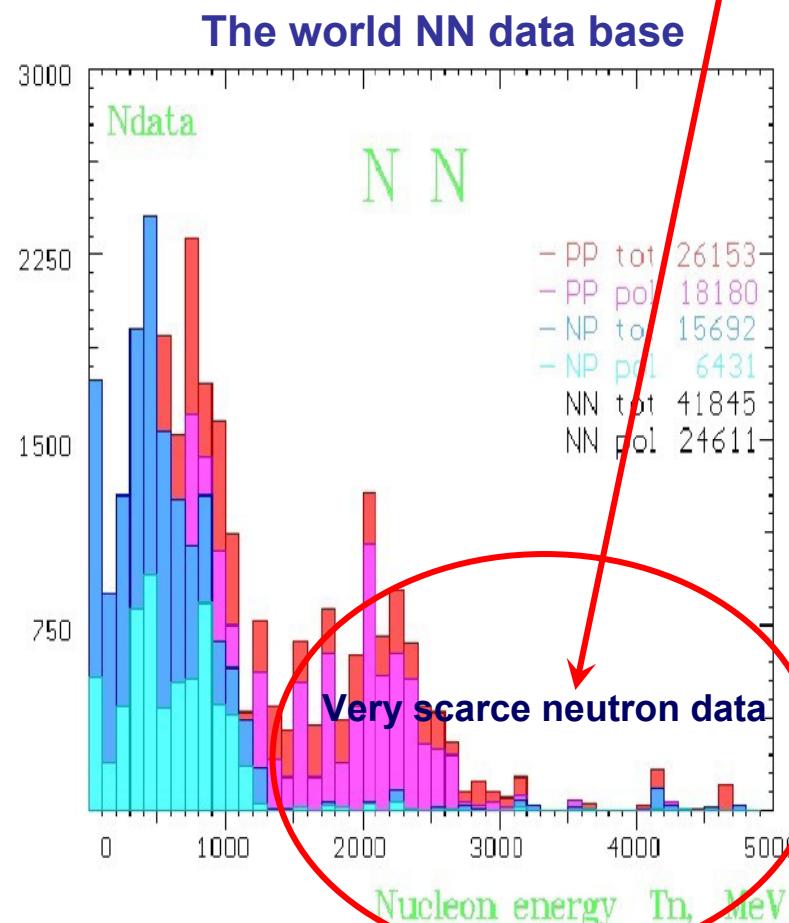

# $\Delta\sigma$ -experiment

L.Strunov, V.Sharov  
tot. FTE ~ 12.5, LHE ~ 9

Full determination of the np elastic scattering matrix element at zero degree in the few GeV energy region. Needs SPI and MPPT.

Nuclotron's region

## Введение

Дальнейшее развитие ф.в.э. в ОИЯИ было обусловлено наличием соответствующей ускорительной базы

Потеря лидирующих позиций синхрофазотрона обусловила реализацию части программы по ф.в.э. и р.я.ф. на внешних базовых установках для сохранения научного потенциала и культуры современного эксперимента:

- **У-70** в Серпухове (**БИС, БИС-2, ЧАРМ, ЭКСЧАРМ, Гиперон,..**)
- **SPS** и **LEP** CERN (**NA4, SMC, DELPHI, NA48, NA49, COMPASS**)
- **RHIC BNL** (**STAR, PHENIX**), **HERA DESY** (**H1, HERMES**),
- **Tevatron FNAL** (**CDF и D0**), **SIS GSI** (**HADES**) и др.
- широкомасштабное участие в программе **LHC** в **CERN**:  
**ATLAS, CMS, ALICE**
- подготовка к участию в программе на **FAIR GSI**:  
**CBM, PANDA**
